Peter.

We just went over the comments again and I can use some help on a few more things.

1. we had once been given cost info for the 3 routes you evaluated. We got lots of comments that the chosen route was the cheapest route. As I recall this was not the case. Can you give us (again?) the cost estimates for the 3 routes.
2. comments were made regarding contaminants in "fracked gas" that can leak into the environment - specifically radon/radium and benzene. Is gas tested at any point in the transmission/distribution system? Do the feds or anyone regulate what are acceptable levels of contaminants in natural gas?

I will be out of the office Monday and Tuesday but Stacey and Larry will be here and I will be reachable and working on the response document. If you need to talk to someone please contact Stacey. I will be back in the office on Thursday.

I hope you have wonderful holiday.

Nancy
